Experience

Capital One

Aug 2026 – Present

Senior Software Engineer

Golang, GraphQL

- Data Platform Interface
 - * Contributing to Golang-based, GraphQL interface abstractions for core credit card APIs, enabling **low-latency** and **high-throughput** access while decoupling consumers from underlying service integrations.
 - * Developing and optimizing high-throughput services handling **8,000+ RPS** with sub-second latency, supporting performance-critical credit card workflows at scale.
 - * Leading a team of 4 engineers in delivering and supporting production systems serving tens of thousands of MAUs, with a focus on scalability, reliability, and execution.

JPMorgan Chase & Co.

Aug 2024 – Aug 2026

Software Engineer II

Java, Spring Boot

- Golden Copy Data Source
 - * Architected and implemented a distributed event processing platform (PostgreSQL CDC, Kafka, stateless consumer microservices) **processing 10M+ events/day** with under **1s end-to-end delivery SLA**.
 - * Designed authoritative event-sourcing model backed by PostgreSQL (ACID-compliant) with Kafka-based propagation, eliminating dependency on external caching layers and ensuring strong consistency under retries and failures.
 - * Led schema design for 500+ attributes per event, introducing versioned schema strategy and extensible data modeling to support high-throughput OLTP writes.
 - * Built a real-time rule evaluation engine supporting thousands of user-defined filters with under **75ms matching latency**, enabling personalized event delivery at scale.
 - * Authored low-level design (LLD) and drove implementation across cross-functional stakeholders (data, infra, consumer teams), defining API contracts adopted by downstream services.
 - * Owned performance tuning and capacity planning, benchmarking throughput (**~7000 events/min** sustained) and identifying bottlenecks across database writes and consumer lag.
 - * Explored integration of **AI-assisted agentic workflows** (code generation, analysis, and automation) to improve developer efficiency, testing and code reliability.
- Electronic Affirmation Router
 - * Designed and implemented multi-venue trade routing flow across 10+ microservices deployed on Kubernetes in JPMC private cloud, **improving routing latency by 40%** across complex trade setups.
 - * Contributed to architecture handling ~1000 trades/day with daily notional value exceeding \$200M, ensuring high reliability and accurate downstream settlement workflows.
 - * Improved observability by standardizing structured logging, health checks, and alerting pipelines across services, **reducing incident response time by 50%** and improving SLA adherence.
 - * Supported 99.99% uptime through resilient service design, graceful failure handling, and production issue triage in a globally distributed environment.

XPO

July 2021 – July 2024

Software Engineer I

Java, Spring Boot, TypeScript, Angular

- Equipment Licensing and Location Management (ELLM)
 - * End-to-end design and delivery, driving architecture decisions and production rollout adopted across multiple regions.
 - * Architected backend services using Spring Boot with REST APIs and relational data modeling, supporting regulatory workflows that contributed to **\$20M+ annual revenue** enablement.
 - * Led migration from legacy on-prem infrastructure to cloud-native deployment, decommissioning legacy systems
 - * Designed and implemented micro-frontend architecture (**Angular + TypeScript, Module Federation**) enabling independent deployments and reducing release cycles by 30%

Technical Skills

Languages/Frameworks: Java, Python, C++, JavaScript, TypeScript, Spring Boot, Angular, React, Golang, GraphQL

Databases & Infrastructure: PostgreSQL, MySQL, Redis, NoSQL, AWS, Kafka, Docker, Kubernetes

Tools & Practices: Git, Jenkins, TeamCity, Maven, Postman, Data Structures & Algorithms, System Design, Distributed Systems, Microservices Architecture, High Availability, Event-Driven Systems, Large-scale systems, Testing, AI-assisted agentic workflows

Education

DA-IICT, Gujarat

July 2017 – June 2021

B.Tech. in Computer Science & Engineering

Gujarat, India
